

Deterministic Algorithms

For a given Input

- ① fix output
- ② fix Runtime

Randomized Algorithms

R_1 : Las Vegas Alg.

- ① fix output
- ② variable Runtime

R_2 : Monte Carlo Alg.

- ① variable output
- ② fix Runtime

A Las Vegas Alg. for Q-Sort (R-QSort)

QSort(x_1, \dots, x_n):

- Pivot = x_1
- j = Partition(x_2, \dots, x_n , Pivot)

$\leq \text{Pivot}$ | Pivot | $\geq \text{Pivot}$

- QSort(x_1, \dots, x_{j-1})

- QSort(x_{j+1}, \dots, x_n)

eg. 1

eg. 2

The Performance of Q-Sort depends on the ordering in the Input
